Professional Summary

Software Engineer with 3+ years of experience developing enterprise applications using Java, Spring Boot, React.js, REST APIs, python, AWS, and SQL databases. Experienced across the full SDLC, database design, cloud-native development, CI/CD, and scalable backend systems. Built AI-powered applications using OpenAI APIs for workflow automation and intelligent decision support. Passionate about building secure, high-performance software that solves real-world problems.

Technical Skills

Languages: Java, JavaScript, Python, C

Data Engineering: ETL Pipelines, Data Migration, Data Transformation, Data Quality Validation
Frameworks: Spring Boot, J2EE, JDBC, React.js, Node.js

Databases: PostgreSQL, SQL

APIs: REST APIs, SOAP Web Services, GraphQL, JSON, OpenAI APIs

AI & Machine Learning: Prompt Engineering, LLM Integration

Cloud & DevOps: AWS (Lambda, API Gateway, S3), Azure DevOps, CI/CD

Architecture: Software Design Patterns, Microservices, Object-Oriented Design, SDLC

Security: JWT, RBAC, OAuth, API Security
Tools: Git, Maven, Postman, Eclipse, VS Code, GitHub Copilot, Great Expectations (GX), Domo, Git, Bitbucket

Professional Experience

Software Engineering Co-op **October 2026 – Present**

Solü Technology Partners

- Developed Python-based ETL pipelines to extract, transform, and migrate legacy broadband data into Gaiia, aligning source records with target schemas and business requirements.
- Implemented transformations for BT Tickets, Ticket Types, and Ticket Comments, including field mapping, filtering, reference IDs, and record relationships.
- Designed deterministic UUID5 reference IDs to replace CRC32 hashing, reducing collision risk and maintaining consistent identifiers across migration runs.
- Built automated data quality checks with Great Expectations (GX) for completeness, uniqueness, required fields, valid values, and referential integrity.
- Integrated ETL workflows with Domo to stage and publish transformed datasets for downstream validation and migration.
- Investigated missing account references, source-data inconsistencies, and identified collisions to improve migration reliability.
- Collaborated with developers and solution leads through Git pull requests, code reviews, and Agile ceremonies.

Java Developer (Academic Internship) **Jan 2026 – May 2026**
Technivio

- Developed a full-stack **Incident Management System** using **Java, Spring Boot, React.js, MySQL, and RESTful APIs**, supporting the complete incident lifecycle from creation to resolution.
- Designed and implemented secure **REST APIs** with **JWT-based authentication, Role-Based Access Control (RBAC)**, and Spring Data JPA to ensure secure and reliable backend services.
- Built scalable backend modules following **microservices architecture**, integrated **Redis caching** and **Elasticsearch** to improve application performance and reduce API response times.
- Developed **unit and integration tests** using **JUnit and Mockito**, participated in debugging, defect fixing, and code reviews to maintain high code quality and application reliability.
- Integrated **OpenAI APIs** to provide AI-powered incident summarization, priority classification, and resolution recommendations, reducing manual incident triage effort by approximately **40%**.

Associate Software Developer **May 2022 – Nov 2024**
Bank of Montreal (BMO) / Virtusa

- Developed enterprise applications using **Java, Spring Boot, and Microservices**, building scalable backend services for core banking applications.
- Utilized **Spring Boot** as the primary framework, designing and implementing **RESTful APIs** for user management, account, and transaction services while integrating with internal and external systems.
- Analyzed and documented **4,000+ lines of legacy Java code** to understand existing business logic, support modernization efforts, and ensure seamless integration with new microservices.
- Designed and optimized **batch processing** applications, improving throughput and reducing execution time for high-volume financial transactions.
- Developed and maintained **event-driven microservices** using **Kafka**, enabling reliable asynchronous communication between distributed services.
- Created comprehensive **unit and integration tests** using **JUnit and Mockito**, achieving **90%+ code coverage** and improving application reliability.
- Built and maintained **Azure DevOps CI/CD pipelines** with Docker-based deployments, reducing deployment time by **40%** through automated build, testing, and release processes.
- Authored technical documentation, participated in **code reviews**, resolved production defects, performed application maintenance, and collaborated with cross-functional Agile teams to maintain high coding standards.
- Optimized **Oracle and PostgreSQL** database performance by improving SQL queries, indexing strategies, and schema design to support high-volume transactional workloads.
- Supported **production applications** by monitoring services, performing root cause analysis, troubleshooting critical issues, and implementing performance improvements.

Software Intern **Jan 2022 – Mar 2022**
Virtusa

- Developed **full-stack web applications** using **Java Spring Boot, React.js, HTML5, CSS, and MySQL** during a structured internship program.
- Built and consumed **REST APIs** for frontend-backend integration; implemented CRUD operations using JDBC and MySQL.
- Delivered responsive UI components, integrated frontend with backend services, and updated features based on stakeholder feedback.

Academic Projects

Chatbot System for College Information (Python) **Mar 2022**

- Built a web-based NLP chatbot that automatically answers student queries about college activities, reducing the need for in-person visits.

Home Service Management System **Nov 2021**

- Developed a full-stack slot booking and review management platform using Java Spring Boot and REST APIs, with separate Admin and User role flows.

Education

- **University of Central Missouri, Warrensburg, MO**
  Master of Science in Computer Science **GPA: 3.6 | Jan 2025 - May 2026**
- **Godavari Institute of Engineering and Technology, Rajahmundry, AP**
  Bachelor of Technology in Computer Science **GPA: 8.1 | June 2018- June 2022**
